

# Player ID

08/01/2024 12:22 pm EST

You can find players using a regex pattern `case-insensitive` by full name, first name, last name.

```
from nba_api.stats.static import players

# Find players by full name.
players.find_players_by_full_name("")

# Find players by first name.
players.find_players_by_first_name("")

# Find players by last name.
players.find_players_by_last_name("")

# Get all players.
players.get_players()
```

For examples of how to use this functionality, check out the [Examples](#) section
