Team ID

You can find teams using regex patterns on fields such as full name, state, city, and nickname. As well as finding teams by year founded, abbreviation, and id.

```
from nba_api.stats.static import teams

# Find teams by full name.
teams.find_teams_by_full_name('cav')

# Find teams by state.
teams.find_teams_by_state('ohio')

# Find teams by city.
teams.find_teams_by_city('cleveland')

# Find teams by team nickname.
teams.find_teams_by_nickname('cav')

# Find teams by year founded.
teams.find_teams_by_year_founded(1968)

# Find teams by abbreviation.
teams.find_team_by_abbreviation('cle')

# Find teams by id.
teams.find_team_name_by_id(1610612739)

# Get all teams.
teams.get_teams()
```

For examples of how to use this functionality, check out the [Examples section](#)
